

Econsult Africa

How It Works

Forecast Arena

Where you don't just read about the economy — you **participate** in it.

Economic Intelligence. Real Decisions.

Welcome to Forecast Arena

Welcome to **Econsult Africa's Forecast Arena** — where you don't just read about the economy, you **participate in it**.

Around the world, platforms like Polymarket and Kalshi have shown that prediction markets can be incredibly powerful tools for understanding the future. They combine the knowledge, opinions, and information of many people into one real-time signal about what people believe will happen.

Econsult Africa is bringing this idea to African markets.

Our goal is simple: give Africans a voice in their economy, in a real-time and transparent way — while generating valuable economic intelligence that can help businesses, researchers, and policymakers make better decisions.

When thousands of people share their views about inflation, exchange rates, elections, business conditions, or economic growth, that information becomes **market sentiment data** — and that data is incredibly valuable for understanding the economy.

So not only can you earn rewards for being right — you are also helping build **Africa's economic intelligence network**.

So How Do Prediction Markets Work?

Think of it like this: instead of just answering a survey question like *"Will inflation go up this year?"* — you actually **put money behind your view**.

You buy **shares** in an outcome you believe will happen. For example:

- "Inflation will be above 7%"
- "The shilling will strengthen"
- "Interest rates will fall"
- "GDP growth will exceed 5%"

If your prediction is correct, your shares pay out. If you are wrong, the money goes to the people who were right.

In short: You earn by being correct.

Important: This Is NOT Betting

This is very important. Econsult Africa **is not a betting company** and does **not operate like a sportsbook**.

Traditional Betting vs. Forecast Arena

Traditional Betting	Forecast Arena
You bet against the house	Participants trade against each other
The house wins when you lose	Econsult does not take the opposite side
The house loses when you win	Econsult does not win when you lose
House has an inherent advantage	The platform simply facilitates the market

Money from the losing side goes to the winning side. Funds are held securely, and when the outcome is determined, winnings are distributed to those who predicted correctly.

It is closer to:

- Crowdsourcing opinions
- Financial markets & stock market trading
- Prediction markets used for research and forecasting

Why We Built This

Most conversations about Africa's economy happen in boardrooms, government offices, research papers, on TV, or on Twitter. But very rarely do **ordinary citizens, entrepreneurs, students, analysts, and professionals** get to collectively express what they think will happen to their economy.

We are building this platform to:

- Capture real-time economic sentiment
- Understand expectations about the economy
- Generate data for research and policy
- Help businesses understand market expectations
- Give Africans a voice in economic conversations
- Build Africa's economic intelligence ecosystem

What Topics Do We Focus On?

We focus on **economic intelligence**, not sensational topics. Our markets cover areas like:

- | | |
|------------------|--------------------------|
| ● Macroeconomics | ● Business conditions |
| ● Microeconomics | ● Political economy |
| ● Finance | ● Development economics |
| ● Exchange rates | ● News & current affairs |
| ● Inflation | ● Elections and policy |
| ● Interest rates | ● Industry trends |

**We are not a sports betting site. We are not a celebrity gossip site.
We are an economic intelligence platform.**

The Big Idea

"The collective intelligence of many informed people is often more accurate than a single expert."

By participating, you are:

- Sharing your expectations
- Learning about the economy
- Competing with others
- Earning rewards for being right
- Helping build Africa's first economic sentiment market

How Forecast Arena Works

At the heart of Forecast Arena is a simple idea: **You buy shares in outcomes you believe will happen.**

Each share pays **\$1 if you are correct** and **\$0 if you are wrong**.

Prices Move With The Crowd

The price of a share is **always changing** based on what people are predicting in real time. If many people believe an event will happen, the price goes **up**. If few people believe it, the price stays **low**.

The share price is essentially the market's estimate of the probability that something will happen.

Share Price	Market Belief
\$0.70	Market believes $\approx$ 70% chance the event will happen
\$0.30	Market believes $\approx$ 30% chance the event will happen

The market price = collective intelligence of all participants.

How People Make Money

Your profit depends on **how early and how different your prediction was**.

Scenario 1 — Following the Crowd

Share price: **\$0.80**
If correct, you earn: **\$1**
Profit: **\$0.20 per share**

You were right — but the market already knew this was likely.

Scenario 2 — You See Something Others Don't

Share price: **\$0.25**
If correct, you earn: **\$1**
Profit: **\$0.75 per share**

Your economic intelligence worked — you saw something before the crowd did.

**The biggest rewards go to people who are right when the crowd is wrong.
That is the whole idea behind prediction markets.**

You Can Buy Multiple Shares

You are not limited to one share. If you strongly believe in something, you can buy 5, 10, 50, or even 100 shares.

Your total profit depends on:

- How many shares you bought
- The price you bought them at
- Whether you were correct

Each participant chooses based on their confidence, liquidity, and risk appetite.

Responsible Participation

We always encourage responsible financial behaviour. Please remember:

- Do not commit money you cannot afford to lose
- Do not overstate on a single forecast
- Diversify your positions
- This is not a financial advice platform
- You are solely responsible for your financial decisions and activity on the platform

Econsult Africa provides the marketplace and the data — participants make their own decisions.

The Bigger Purpose

Forecast Arena is not just about winning or losing. By participating, you are helping to:

- Build Africa's economic sentiment data
- Show what citizens expect about inflation, growth, exchange rates, elections, and business conditions
- Provide real-time economic intelligence
- Create data that researchers, businesses, and policymakers can use
- Give Africans a voice in their economy

You are not just predicting the future. **You are helping measure expectations about Africa's future.**

So if you have an opinion about the economy...
If you follow news, business, politics, or finance...
If you believe you can see trends before others...

**Take your position on the Forecast Arena.
Add your voice to the market.
Be part of shaping Africa's economic future.**

Economic Intelligence. Real Decisions.
