

Introducing a prediction market on the economy

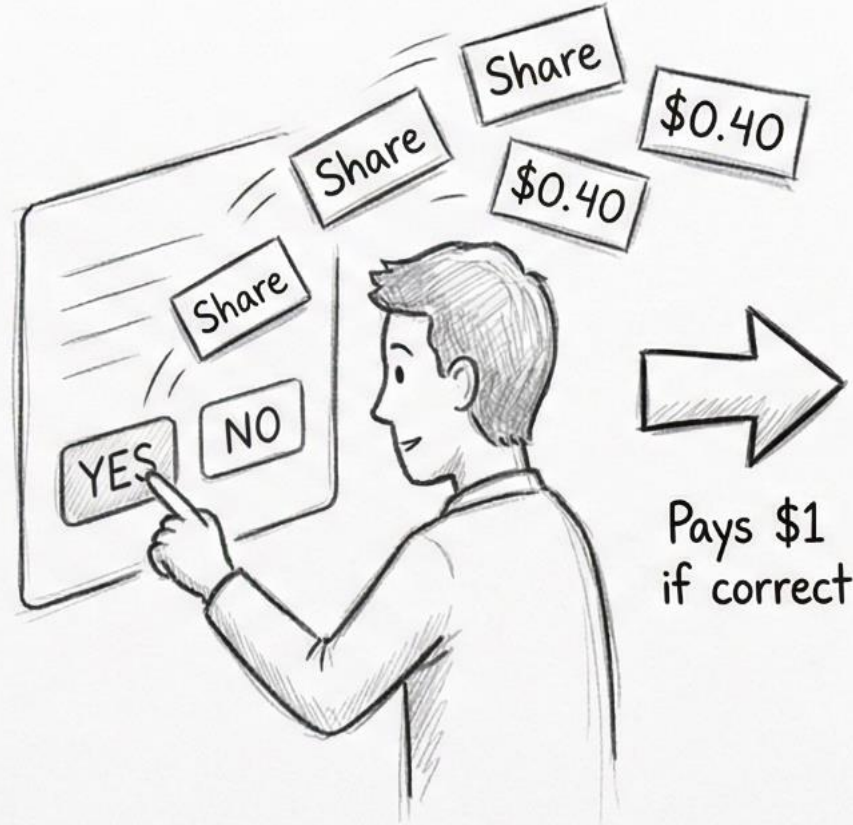

Buy Shares in What You Believe Will Happen

Prediction Question

Will inflation be above 7% this year?

YES NO

Buy shares in outcomes you believe will happen

Each share pays \$1 if you are correct

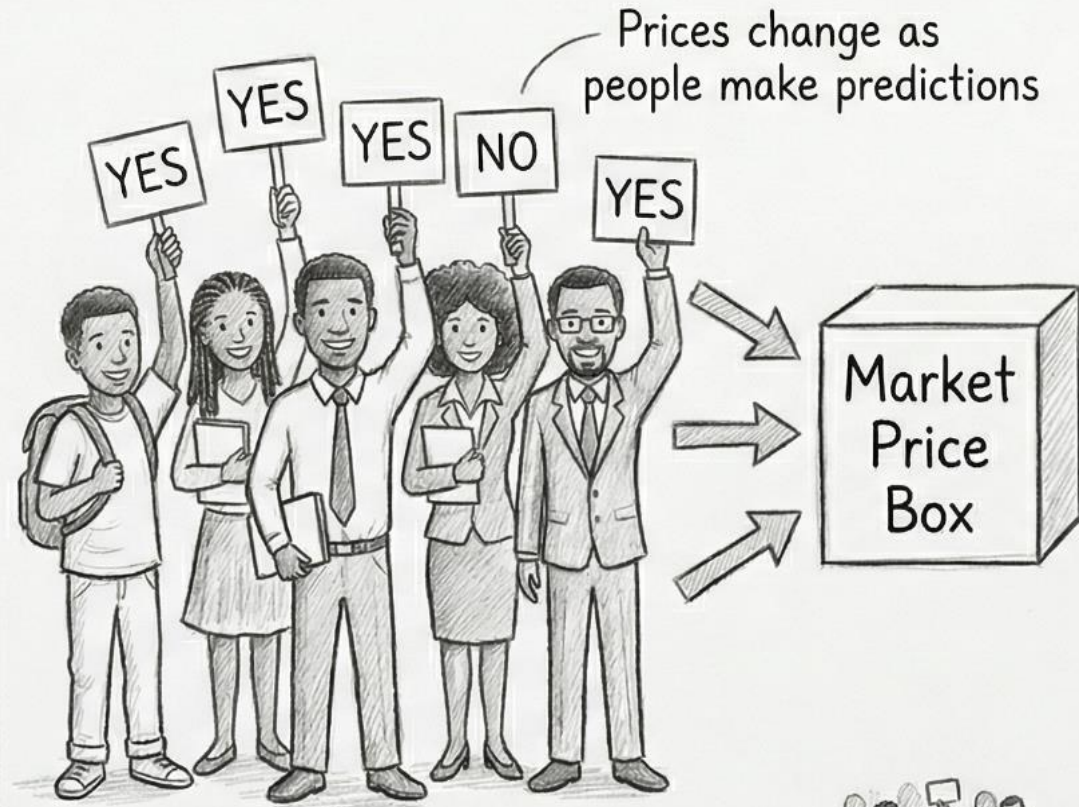

→
Pays \$1 if correct

Buy Share (\$0.40) → Event Happens → \$1 Payout

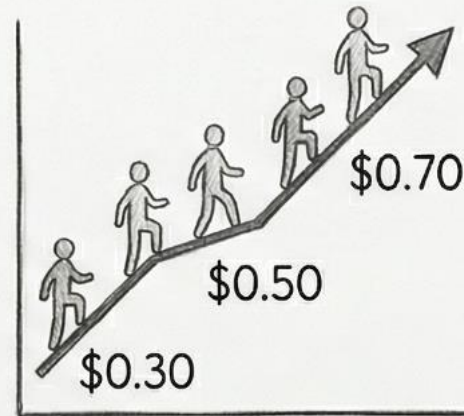

Profit = \$0.60

Profit depends on the price you paid

Prices Move With The Crowd

- Prices change as people make predictions
- More buyers $\rightarrow$ higher price

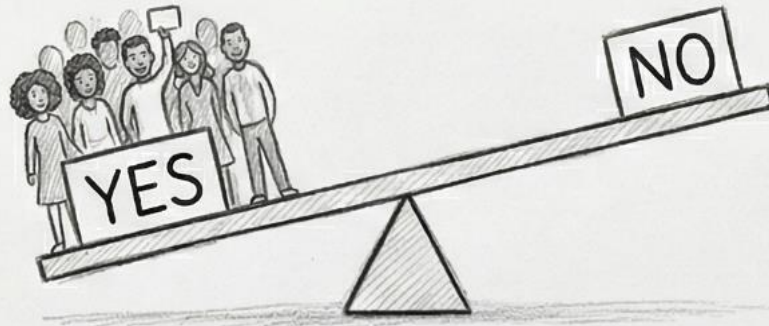

- Price increases as more people believe the event will happen

\$0.30 $\rightarrow$ 30% chance

\$0.50 $\rightarrow$ 50% chance

\$0.70 $\rightarrow$ 70% chance

Price reflects probability

The market estimates the chance of an event

Share price = probability

Following The Crowd

If everyone already knows, profits are small.

Crowd

Buy low, earn more if correct

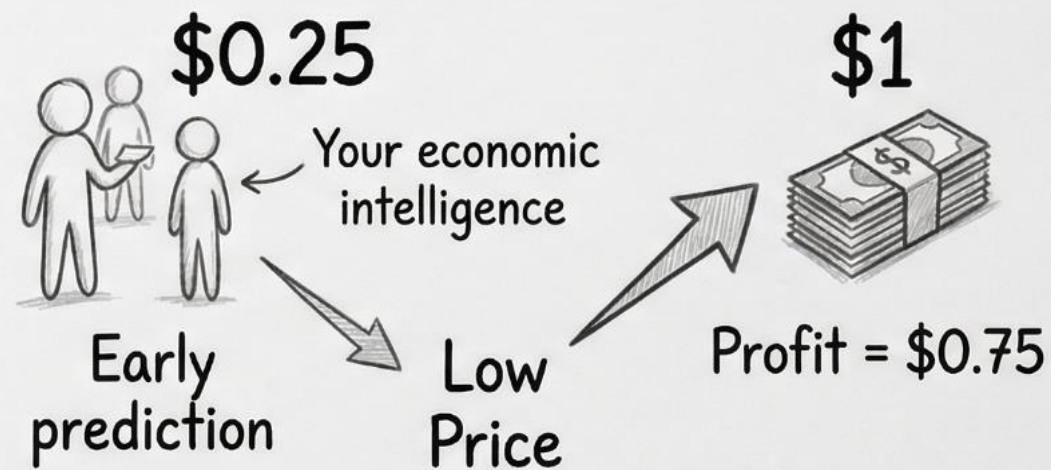

Profit = \$1 - price you paid

Prices move as people update their predictions

Being Early / Different

If you are right before the crowd, profits are bigger.

The biggest rewards go to people who are right when others are wrong

Prediction markets reward good forecasts
